You can get special battery boxes made out of plastic or fiberglass at an auto parts store. Battery acid can eat through concrete, so if you have to put it on the ground, try to set it on sealed asphalt. If a battery leaks battery acid onto the ground, you can soak it up with baking soda or lime.

An inverter will never be able to operate at 100 per cent efficiency. It will instead, likely operate at between 50-80 per cent efficiency. If its efficiency is 70 per cent, its power factor will be 0.7, if its 80 per cent, the power factor will be 0.8 and so on.

\$begingroup\$ Car battery will work but have a relatively short lifetime. Car batteries are designed for "float" operation = being kept near full charge most of the time. If you want to regularly discharge a battery by a substantial % of its total capacity you need a "deep discharge" battery if you want reasonable cycle life.

Buy a 24V inverter. There is really no other way if you want to continue using a 24 volt system. Connecting the 12V inverter to only one battery would imbalance that string.

Inverter batteries are available in different types, including lead-acid and tubular batteries. Lead-acid batteries are the most common type of inverter batteries and are widely used in homes and offices.. These batteries are affordable and come in various sizes and capacities. Tubular batteries, on the other hand, are more expensive but are ...
