EV CHARGING ANYWHERE. When expanding electric vehicle charging networks, one of the hurdles operators come across is the limited availability of power from the electric grid, this can result in costly grid upgrades making the location too expensive for EV charging or slower charging speeds than required.

The specific location of the charging stations and the number of charging piles are presented in Table 4. In addition, the traffic speed of each road section in the area at a certain time is presented in Table 3. Thus, according to the shortest path algorithm and Eq. (2), the travel time t_{ij} of $E V_i$ to charging pile $C P_j$ can be obtained.

Based on this, combining energy storage technology with charging piles, the method of increasing the power scale of charging piles is studied to reduce the waiting time for users to charge. [18] The large-scale
