

How to reinstall the battery panel on the light board

This DIY repair guide explains how to replace the LED light board in a freezer. The LED light board holds the LED lights and controls power to the lights, illuminating the freezer interior when you open the door. If the board fails, the lights won't come on. Replace the LED light board with the manufacturer-approved freestanding freezer part.

Be careful not to snap either posts or the light board. To install the new light board, I found it easier to connect the electrical source first, then push the light board onto the plastic posts to secure the light board. There are holes in the light board to insure a secure fit. Reinstall the light cover and reinstall the mounting screw. All ...

Reinstall the battery pack. If the charge indicator or icon is still off, replace the battery pack. If the charge indicator still does not light on, replace the system board. Checking the battery pack . Battery charging does not start until the Power Meter shows that less than 95% of the total power remains. Under this condition the battery pack can charge to 100% of its capacity. This ...

If the battery is connected to a circuit board, reattach the wires using a soldering iron. Step 7: Test the Emergency Light. Turn on the power supply to the emergency light and test the device. Ensure that the light turns on when the power supply is disconnected or when the test button is pressed. If the light does not turn on, check the connections and ...
