In many cases, during the impeller replacement, the motor shaft will have some niches in it where you will be able to insert your regular screwdriver. Pumps like these will not require you to use a wrench or even discharge the capacitor since the openings will usually be noticeable right after removing the covering. Step 6: Detach the Impeller

If you just need to clean it, read my article on cleaning your pool pump impeller. Here's a step-by-step guide to replacing your pool pump's impeller. Step 1: Cut the Power. You need to be sure your pump won't turn on while you're working, so make sure to unplug it.

Attach the pump power cable wires and ground per pump's wiring diagram. Replace access cover. Tighten cable clamp. Make sure the wire ends are clean for a good connection to your new pump. Our replacement pumps have a label diagram showing the wiring scheme. Two-Speed Pump Configuration. A two-speed pump requires 3 line ...

Page 7 Pump Motors An open impeller puts a great deal more force on the motor bearings than does the closed impeller. A 203 bearing is often used with closed impeller pumps while open impeller may require a larger 304 bearing on shaft end. Closed impeller pumps are used extensively today. Page 8: Motor Replacement
