If  $V = 1$  Volt than  $C = Q$ , thus capacitance is defined as the amount of electric charge in coulomb required to raise its potential by one volt. If  $V = 1$  Volt than  $C = Q$ , and  $Q = 1$  Coulomb than  $C = 1$  Farad thus one Farad is capacitance of a capacitor which stores a charge of one coulomb when a voltage of one volt is applied across its terminal.
