

If the battery voltage is too high please unplug the power cord

I have a Dell Studios XPS 1640, and it requires a 90W charger for use. I lost my power cable, so I'm now using a 65W charger. My computer has slowed down noticeably whenever it is charging. The computer speeds up directly after I unplug the cord. Could this be because of the power cable itself?

Should I leave the power cord plugged in once my laptop battery is 100% charged or that is bad for the battery? At this point I'm thinking that the problem lie in how the laptop uses the battery though I'm not sure how to test this. Once the power cable is unplugged, the laptop will remain on but the built in battery light turns orange. It abruptly shuts down after about 10 minutes so it is using the battery to an extent. This is a Dell Inspiron 6400.
