Here are the two main types of solar power plants currently in use around the world: Photovoltaic. Photovoltaic solar power plants are essentially large-scale versions of the solar systems used in houses. They consist of large grids of photovoltaic panels in open areas and feed energy directly into the grid or storage units for later use.

It is assumed that the installed PV power station has a relatively ideal geographical location, which is jointly determined by investment decision makers and experts [23]. The modeling procedures of evidence-based location choices of solar PV power plants with machine learning methods are shown in Fig. 1.

As a hydrogen plant, large-scale PV power stations are usually built in remote areas far away from the hydrogen energy market. Thus, hydrogen must to be delivered to hydrogen refueling stations (HRS). ... Economic feasibility of large-scale hydro-solar hybrid power including long distance transmission.
