How to safely pack and ship batteries Protect batteries and terminals When shipping almost any battery, you must protect all terminals against short circuits that can result in ...

Lead-acid batteries belong to the eighth category of dangerous goods, transportation requires a license, and export lead-acid batteries must be specially packaged (qualified packaging certificate), otherwise the customs ...

The electrolyte's chemical reaction between the lead plates produces hydrogen and oxygen gases when charging a lead-acid battery. In a vented lead-acid battery, these gases escape the battery case and relieve excessive pressure. But when there's no vent, these gasses build up and concentrate in the battery case.

A UPS guide to help you safely pack and ship many kinds of batteries including lithium metal, damaged or defective batteries and alkaline or certain nonspillable lead-acid batteries.
