Let's see with a solved example of DC connected capacitor. We know that there is no frequency i.e. 0Hz frequency in DC supply. If we put frequency " $f = 0$ " in the inductive reactance (which is AC resistance in capacitive circuit) formula. $X_C = 1 / 2\pi f C$. Putting $f = 0$ $X_C = 1 / 2\pi \cdot 0 \cdot C$. $X_C = 1/0 = \text{Infinity}$. It means, theoretically, a capacitor will provide infinite resistance ...
