The simplest method of hydrogen storage is in a gaseous state (in a cylinder), but since the gaseous hydrogen density under normal conditions is only 90 g/m 3, an 11.2 m 3 cylinder is required to store 1 kg of hydrogen. Hydrogen is stored in regular steel cylinders at a pressure of up to 200 atm; at this pressure, approximately 16 kg of ...

In the medium to long term, centralised fossil fuel-based production of hydrogen, with the capture and storage of CO2, could be the technology of choice. However, the capture and storage of CO2 is not yet technically and commercially proven. Further R& D on the processes of absorption and separation are required.
