In such applications, it is beneficial to connect LA batteries and lithium-ion batteries in hybrid battery energy storage (HBES). The lithium-ion battery is used as the higher-priority discharge battery, due to its durability in low SoC working condition, and share the load current with the LA battery during peak power demands (accelerations).

The DOE"s Office of Energy Efficiency and Renewable Energy provides useful data to understand the costs of solar-plus-storage and how duration of storage impacts cost. It may seem counterintuitive, but energy storage costs actually decrease with longer duration because the cost of inverters and other hardware account for more of the total ...
