Furthermore, the charging or discharging rate of the battery is expressed in fractions or multiples of the C rate. For example, a C/2 charge or discharge rate means that the battery will be charged or discharged in two hours whereas a 2C charge or discharge takes 30 min. Batteries best operate at low C rates, so the lithium ions ...

Lithium-ion batteries (LIBs) have a wide range of applications from electronic products to electric mobility and space exploration rovers. This results in an increase in the demand for LIBs, driven primarily by the growth in the number of electric vehicles (EVs). This growing demand will eventually lead to large amounts of waste LIBs ...

1. Introduction. Lithium-ion batteries (LIBs) have gained widespread popularity due to their excellent electrochemical performance, including high stability, compact size, lightweight construction, and high-power output (W. Chen et al., 2021; Huang et al., 2022; Lei et al., 2021; Luo et al., 2023b). The increasing global demand for ...

The shuttling of soluble lithium polysulfides between the electrodes leads to serious capacity fading and excess use of electrolyte, which severely bottlenecks practical use of Li-S batteries. Here, selective catalysis is proposed as a fundamental remedy for the consecutive solid-liquid-solid sulfur redox reactions.

As depicted in Fig. 2 (a), taking lithium cobalt oxide as an example, the working principle of a lithium-ion
