The battery module stores 100 kJ of power, and leaks 400J per cycle, while producing no heat. Because of this it acts as a superior version of the Jumbo Battery (2.5x the storage, 5x less leakage, and without the heat). It has very little burden or height, and may be preferable to other options (i.e. batteries taking up space in the crew modules).

Battery module design is undergoing constant transformation to meet the escalating demands of energy storage. Notably, trends and innovations are shaping the future of battery technology: Advanced Materials: Researchers explore materials like silicon-graphene composites and lithium-sulfur compounds for enhanced energy density and longer cycle life.
