Model-based methods are the most promising for real-world applications owing to the strengths of easy implementation, satisfactory accuracy, and closed-loop framework [7]. Models for battery packs can be classified into the big-cell model (BCM) [13], mean-difference model (MDM) [3, 14], $V_{\min} + V_{\max}$ model (VVM) [4, 15], and multi-cell model (MCM) [18].

Battery packs are applied in various areas (e.g., electric vehicles, energy storage, space, mining, etc.), which requires the state of health (SOH) to be accurately estimated. Inconsistency, also known as cell variation, is considered a significant evaluation index that greatly affects the degradation of battery pack. This paper
