1 Introduction. Lithium-ion batteries (LIBs) have long been considered as an efficient energy storage system on the basis of their energy density, power density, reliability, and stability, which have occupied an irreplaceable position in the study of many fields over the past decades. [] Lithium-ion batteries have been extensively applied in portable electronic devices and will play ...

The best option is pairing the solar system with a battery. You can use a battery to store the surplus energy from the solar system rather than feeding it back into the electric grid, and then use that stored power in the evening rather than drawing in from the grid. So, let's say you produce 10 kWh of excess solar power during the day.
