a bacteria that absorbs the most amount of lithium, making it a practical approach to the fungus-bacterium co-culture. This system will help extract the lithium to be reused, rather than being thrown away. Bioleaching begins with metabolites, which dissolve the lithium by displacing the lithium ion from the battery with hydrogen ions

The optimisation results showed that *P. chrysogenum* and *A. niger* were able to leach 73.31% and 54.6% of the lithium in the battery powder at the best condition, respectively.

Even after extinguishing a lithium-ion battery fire, there is a risk of reignition. Thermal runaway. This is the chain reaction of uncontrolled heating can lead to fire or explosion. Signs of damage or thermal runaway include: Mechanical damage such as cracking (from abuse or dropping/collision).

Longer life Lithium batteries are rated for 2,000 5,000 cycles and much more if used carefully, giving you several times the life expectancy of standard lead-acid batteries. Powerful Lithium batteries allow you to pull far more amps out of the same size battery systems. Light-weight Lithium batteries are less than half the weight of the equivalent lead-acid battery.
