Dihydrogen (H2), commonly named "hydrogen", is increasingly recognised as a clean and reliable energy vector for decarbonisation and defossilisation by various sectors. The global hydrogen demand is projected to increase from 70 million tonnes in 2019 to 120 million tonnes by 2024. Hydrogen development should also meet the seventh goal of "affordable and clean energy" of ...

The efficiency of energy storage by compressed hydrogen gas is about 94% (Leung et al., 2004). This efficiency can compare with the efficiency of battery storage around 75% (Chan, 2000; Linden, 1995). It is noted that increasing the hydrogen storage pressure increases the volumetric storage density (H2-kg/m 3), but the overall energy
