Advances in ceramic disc capacitors for automotive applications. In industrial electronics, where parts have to operate under extreme conditions, there is an ongoing trend towards higher quality and reliability standards. This requires the use of electronic components with long lifetimes and the utmost reliability.

Ceramic disc capacitors tend to be through-hole components which mean that they come with long legs that are put through holes in PCBs and soldered in place. Typical capacitance ratings are from around 10pF to 100mF. ...

Two types are ceramic are in common use - disc capacitors and multilayer ceramic capacitors (MLCC). Dielectric constant of ceramic varies widely with nature of ceramic used, and can vary from 20 to 20,000. This gives a huge possibility of large range of ceramic capacitor sizes and voltage ratings. Capacitance in the same volume varies widely with ...
