

Timely and effective drying of agricultural products is crucial for ensuring the quality and yield of grains. Biomass drying enhances energy utilization and reduces energy pressure. To this end, a novel multi-channel circulating biomass hot air furnace was designed to provide precise control of the heat source for grain drying, thereby improving the efficiency ...

Li JQ, Yang F, Robinson F et al (2017) Design and test of a new droop control algorithm for a SMES/battery hybrid energy storage system. Energy 1(18):1110-1122. Article Google Scholar Li PQ, Duan KH, Dong YT et al (2017) Energy management strategy for photovoltaic DC microgrid with distributed hybrid energy storage system. Power Syst ...

Based on the principle of integral circuit and thermal element, the present study considers the application of 80C51 single-chip micro-computer into the design of intelligent temperature control ...

high-energy laser system requirements for multiple output modes [1]. In this paper, a high-power semiconductor laser control system that integrates two constant current drive and temperature control functions are designed and produced. The system has high driving stability and temperature control ability. Besides, the system adopts a modular ...

In this paper, an intelligent water dispenser automatic control system is designed by using a microcontroller as the core. Relevant signals are collected through temperature sensor, liquid level ...

PDF | This book thoroughly investigates the pivotal role of Energy Storage Systems (ESS) in contemporary energy management and sustainability efforts.... | Find, read and cite all the research you ...

Secondly, in the integration of renewable energy and microgrid applications, the containerized liquid cooling energy storage system enables energy storage, dispatch, and balance, thereby enhancing the efficiency and reliability of renewable energy utilization. Additionally, the system can be applied in industrial energy storage, temporary power supply, ...

In recent years, due to the large number of applications of intelligent greenhouse systems, intelligent robots such as agricultural operation robots, and intelligent mobile devices, as well as the fusion of image processing and various sensors, such as the introduction of semantic segmentation and 3D laser radar in mobile robots [1, 2], which makes ...

Keywords: Artificial intelligence, Data center, Temperature control system. 1. Introduction The temperature control system is the result of modern electronic technology, ...

This system combines PID algorithm and fuzzy control to design a fuzzy PID intelligent controller, which

could process complex data and complex systems simultaneously. The high flexibility of ...

The system detects the temperature and humidity in the grain depot in real time through the DHT11 temperature and humidity sensor, and sends the collected temperature and humidity to the SCM through the serial bus, and the SCM displays the temperature and humidity through the LCD display circuit. The sensor internal temperature and humidity for the upper and lower limit ...

The present review article examines the control strategies and approaches, and optimization methods used to integrate thermal energy storage into low-temperature heating ...

In addition to meeting the power required by the ship during normal operation, the HESS must recover braking energy as much as possible. The control part of the HESS uses a 3D input fuzzy algorithm: the fuzzy controller will fuzzily the input parameters such as system demand power Preq(t), the real-time maximum allowable power of lithium-ion battery (P B ...

Principle of AMTC. Drawing on the concept in Fig. 1c, d, we construct a two-dimensional multi-temperature control system using conduction heat transfer (Fig. 2). The system comprises a heat source ...

The operational principles of thermal energy storage systems are identical as other forms of energy storage methods, as mentioned earlier. A typical thermal energy storage system consists of three sequential processes: charging, storing, and discharging periods. These periods are operated in a cyclic manner in a certain period which will be ...

PDF | Energy storage is one of the most important energetic strategies of the mankind, along with other energy challenges, such as development of energy... | Find, read and cite all the research ...

An intelligent light control system based on ARM9 as core processor CPU by dividing the classroom lighting into several square area was proved with the merits of simple operation, low cost, high reliability and energy saving. With aim to save energy that seriously wasted in classroom, this paper propose an intelligent light control system based onARM9 ...

At present, the great majority of temperature and moisture controller employ the traditional proportional-integral-differential control principle, which is difficult to obtain higher control accuracy and better control quality. In the article, humanoid intelligent control algorithm is introduced into temperature and humidity control. Practice ...

Keywords: machine learning, electric vehicle, heat pump air conditioning, control system, defrost. Citation: Miao Z (2023) Intelligent control system for the electric vehicle heat pump air conditioner based on machine learning. Front. Energy Res. 11:1142243. doi: 10.3389/fenrg.2023.1142243. Received: 11 January 2023; Accepted: 03 March 2023;

In order to conduct production efficiently and achieve the desired control effect, important parameters such as temperature, power, pressure, and speed must be effectively ...

In this paper, a genetic algorithm (GA)-optimized fuzzy control energy management strategy of hybrid energy storage system for electric vehicle is presented. First, a systematic characteristic experiment of lithium-ion batteries and ultracapacitors is performed at different temperatures. Second, the accurate battery and ultracapacitor models are ...

This lecture will provide a basic understanding of the working principle of different heat storage technologies and what their application is in the energy transition. The following topics will be discussed: The need for thermal energy ...

As renewable energy production is intermittent, its application creates uncertainty in the level of supply. As a result, integrating an energy storage system (ESS) into renewable energy systems could be an effective strategy to provide energy systems with economic, technical, and environmental benefits. Compressed Air Energy Storage (CAES) ...

In the closed warehouse environment, this paper designed an intelligent temperature and humidity monitoring system based on the modular design method to solve the problem that the product is easy to damage. Based on the interaction between the STM32 Main control chip and the upper computer, the warehouse temperature, humidity dual control, and ...

As global energy systems are undergoing a transition toward decarbonization and digitalization, demands for intelligent energy systems with the more advanced operation, control, and planning are increasing. However, the operation, control, and planning of such intelligent systems pose a number of challenges that need to be addressed. Currently, the ...

2.6 Photic-thermal and electrical-thermal integrated intelligent temperature control. As the main source of energy in space, sunlight can warm a spacecraft by a moderate amount; however, overexposure may cause thermal imbalance, exposing lives and equipment to high-temperature damage. Based on the combined capabilities of LCE/LM-50, such as its ...

Energy storage has become a fundamental component in renewable energy systems, especially those including batteries. However, in charging and discharging processes, some of the parameters are not controlled by the battery's user. That uncontrolled working leads to aging of the batteries and a reduction of their life cycle. Therefore, it causes an early ...
