Some batteries have a sad little quirk--if you try and draw too much from them too quickly, the chemical reactions involved can't keep up and the capacity is less! So, we always have to be careful when we talk about battery capacity and remember what the battery is going to be used for. Another popular term is "energy density". This is ...

LIBs have been the dominant electrochemical energy-storage technology/device since its commercialization in 1990s. In commercial LIBs, LiFePO_4 , LiCoO_2 , and lithium nickel manganese cobalt oxide (NMC) 1 compounds are widely used as cathodes, with graphite still almost exclusively used as anode. As the energy density and capacity ...
