The most commonly used electrode materials in lithium organic batteries (LOBs) are redox-active organic materials, which have the advantages of low cost, environmental safety, and adjustable structures. Although the use of organic materials as electrodes in LOBs has been reported, these materials have not attained the same recognition as inorganic electrode ...

In 2012, Zhao et al. [13] proposed lithium-rich anti-perovskites (LiRAPs) with a formula of  $X_{+3}B_{2-}A_{-}$  (e.g.,  $Li_3OCl$ ). The anion sublattice of anti-perovskites is in a body-centered-cubic (bcc) packed pattern and  $Li^{+}$  ions occupy the cubic-face center sites forming octahedral units, which has been believed to promote high ionic mobility [8] (Fig. 2 b). ). ...

With the rapid development and wide application of lithium-ion battery (LIB) technology, a significant proportion of LIBs will be on the verge of reaching their end of life. How to handle LIBs at the waste stage has become a hot environmental issue today. Life cycle assessment (LCA) is a valuable method for evaluating the environmental effects of products, ...

In recent years, the rapid evolution of transportation electrification has been propelled by the widespread adoption of lithium-ion batteries (LIBs) as the primary energy storage solution. The critical need to ensure the safe and efficient operation of these LIBs has positioned battery management systems (BMS) as pivotal components in this landscape. ...

Article Info Using lithium-ion batteries has emerged as a viable approach to lessen the negative effects of fossil fuel use.  $LiFePO_4$  (LFP) is one of the lithium-ion batteries that are eco-friendly ...

Since their commercialization in 1991, lithium-ion batteries (LIBs), one of the greatest inventions in history, have profoundly reshaped lifestyles owing to their high energy density, long lifespan, and reliable and safe operation. ... Research on SEI has made remarkable progress; however, the structure, component, and accurate regulation ...

1 Introduction. As the emerging markets of portable electronics and electric vehicles create tremendous demand for advanced lithium-ion batteries (LIBs), 1, 2 there is growing interest in developing battery

Given the global emphasis on the promotion of clean energy and the reduction of carbon emissions, there has been a growing demand for the development of renewable energy worldwide [1]. Among various existing energy storage systems, lithium-ion batteries (LIBs) have been used in many fields due to their high energy conversion efficiency, stable cycling ...

At present, the research on commercial lithium batteries is approaching a bottleneck, but people's demand for energy storage technology is still increasing. Lithium-sulfur batteries have attracted widespread attention as they have a high theoretical energy density (2600 Wh/kg) and theoretical specific capacity (1675 m Ah/g). In addition, sulfur is abundant and non-toxic in ...

Lithium-ion batteries (LIBs), while first commercially developed for portable ...

Lithium ion batteries as popular energy storage equipments are widely used in portable electronic devices, electric vehicles, large energy storage stations and other power fields [1], [2], [3]. With the transformation of energy structure and the renewal of large electrical equipment, there is no doubt that lithium ion batteries bring great changes and convenience ...

The demand for high performance lithium-ion batteries (LIBs) is increasing due to widespread use of portable devices and electric vehicles. Silicon (Si) is one of the most attractive candidate anode materials for next generation LIBs. However, the high-volume change ( $>300\%$ ) during lithium ion alloying/de-alloying leads to poor cycle life. When Si is used as the ...

Because of the increasing demand for lithium-ion batteries, it is necessary to develop battery materials with high utilization rate, good stability and excellent safety. 47,48,49 Cobalt oxides ( $\text{CoO}_x$ ) are promising candidates for lithium-ion batteries in view of their high theoretic specific capacity, especially the spinel type oxide  $\text{Co}_3\text{O}_4$  the crystal structure of  $\text{Co}_3\text{O}_4$ ,  $\text{Co}_3 + \dots$

This not only increases the reversible capacity but also raises the full-cell voltage, improves the deep discharge endurance, and elongates the cycle life. Meanwhile, the post-lithium-ion batteries (i.e., lithium-sulfur, lithium-oxygen, solid-state lithium metal, sodium-ion batteries) face the same problems like low ICE and specific energy.

Featured with high energy density and sound safety, solid-state lithium-ion battery is the key to breaking through the bottleneck shackling battery technology, gathering wide attention from academia and industry. Solid-state electrolytes are the core of solid-state batteries, among which polyethylene oxide (PEO) polymer solid-state electrolyte excels at improving electrode ...

Lithium-sulfur batteries (LSBs) have already developed into one of the most promising new-generation high-energy density electrochemical energy storage systems with outstanding features including high-energy density, low cost, and environmental friendliness. However, the development and commercialization path of LSBs still presents significant ...

Lithium-ion batteries (LIBs) have gained significant importance in recent years, serving as a promising power source for leading the electric vehicle (EV) revolution [1, 2]. The research topics of prominent groups worldwide in the field of materials science focus on the development of new materials for Li-ion batteries [3,4,5]. LIBs are considered as the most ...

This review introduces the application of magnetic fields in lithium-based batteries (including Li-ion batteries, Li-S batteries, and Li-O<sub>2</sub> batteries) and the five main mechanisms involved in promoting performance. This figure reveals the influence of the magnetic field on the anode and cathode of the battery, the key materials involved, and the trajectory of ...

of batteries. In addition, further improvements in the current LIBs and reviving lithium metal batteries have received intensive interest. The electrode/electrolyte interface is formed on the electrode surface during the initial charging/discharging stage, whose ionic conductivity and electronic insulation ensure rapid transport of lithium ions and

High-power and fast-discharging lithium-ion battery, which can be used in smart power grids, rail transits, electromagnetic launch systems, aerospace systems, and so on, is one of the key research directions in the field of lithium-ion batteries and has attracted increasing attention in recent years. To obtain lithium-ion batteries with a high power density, ...
