

# Prospects of positive electrode materials for lithium-ion batteries

Electrode materials such as  $\text{LiFeO}_2$ ,  $\text{LiMnO}_2$ , and  $\text{LiCoO}_2$  have exhibited high efficiencies in lithium-ion batteries (LIBs), resulting in high energy storage and mobile energy density [9].

The first organic positive electrode battery material dates back to more than a half-century ago, when a 3 V lithium (Li)/dichloroisocyanuric acid primary battery was reported by Williams et al. [1].

He received his Ph.D. degree in University of Tsukuba (Japan) in 2019. His research is focused on positive electrode materials for Li/Na-ion batteries and electrolyte design related to electrochemical energy storage. Shuai Tang is an Associate Professor in the College of Chemistry at Zhengzhou University in the People's Republic of China. He ...

Benefitting from these advantages, organic electrode materials could be acted as artificial SEI layers for inorganic electrode materials to optimize the transmission behavior of ...

Synthesis of Co-Free Ni-Rich Single Crystal Positive Electrode Materials for Lithium Ion Batteries: Part I. Two-Step Lithiation Method for Al- or Mg-Doped  $\text{LiNiO}_2$ , Aaron Liu, Ning Zhang, Jamie E. Stark, Phillip Arab, Hongyang Li, J. R. Dahn ... Synthesis of Co-Free Ni-Rich Single Crystal Positive Electrode Materials for Lithium Ion Batteries ...

6 of novel positive electrode materials with a large capacity (e.g.,  $\geq 200 \text{ mA h g}^{-1}$ ) and/or high average voltage (e.g.,  $\geq 4 \text{ V vs. Li/Li}^+$ ), [13-19] the key determinant in further enhancing cell energy densities. Meanwhile, major attention has been directed to designing electrolyte

Recently, with large-scale energy storage equipment gradually becoming the research hotspot in the field of electrochemistry, rechargeable aluminium ion batteries (AIBs) have been described as the most promising ...

In many systems, the cathode is an aluminum foil coated with the active cathode material. Lithium-ion batteries most frequently use the following cathode chemistry blends: LFP (Li ... Kumagai N (2005) Role of alumina coating on Li-Ni-Co-Mn-O particles as positive electrode material for lithium-ion batteries. Chem Mater 17:3695-3704.

Rechargeable batteries provide solution to meet the present day energy challenge. Among rechargeable batteries, lithium-ion batteries (LIBs) have proven to be more popular owing to their high energy and power densities [21, 22]. Lithium ion batteries are used as power sources for electronic devices such as cell phones and laptops.

The development of efficient electrochemical energy storage devices is key to foster the global market for sustainable technologies, such as electric vehicles and smart grids. However, the energy density of

# Prospects of positive electrode materials for lithium-ion batteries

state-of-the-art lithium-ion batteries is not yet sufficient for their rapid deployment due to the per Journal of Materials Chemistry A Recent Review Articles

This review provides an overview of the major developments in the area of positive electrode materials in both Li-ion and Li batteries in the past decade, and particularly in the past few years.

A corresponding modeling expression established based on the relative relationship between manufacturing process parameters of lithium-ion batteries, electrode microstructure and overall electrochemical performance of batteries has become one of the research hotspots in the industry, with the aim of further enhancing the comprehensive ...

The lithium-ion battery generates a voltage of more than 3.5 V by a combination of a cathode material and carbonaceous anode material, in which the lithium ion reversibly inserts and extracts. Such electrochemical reaction proceeds at a potential of 4 V vs. Li/Li + electrode for cathode and ca. 0 V for anode. Since the energy of a battery depends on the product of its voltage and its ...

Advances and Prospects of Surface Modification on Nickel-Rich Materials for Lithium-Ion Batteries ... including the species used in coating, synthetic strategies of uniform coating layer, and the positive effects of coating species on the active materials. Detailed discussions are also taken to describe the formation mechanism of the surface ...

Reasonable design and applications of graphene-based materials are supposed to be promising ways to tackle many fundamental problems emerging in lithium batteries, including suppression of electrode/electrolyte side reactions, stabilization of electrode architecture, and improvement of conductive component. Therefore, extensive fundamental ...

Recent trends and prospects of anode materials for Li-ion batteries. The high capacity (3860 mA h g<sup>-1</sup> or 2061 mA h cm<sup>-3</sup>) and lower potential of reduction of -3.04 V vs ...

The lithium-ion (Li-ion) battery has received considerable attention in the field of energy conversion and storage due to its high energy density and eco-friendliness. Significant academic and commercial progress has been made in Li-ion battery technologies. One area of advancement has been the addition of nanofiber materials to Li-ion batteries due to their ...

The key to sustaining the progress in Li-ion batteries lies in the quest for safe, low-cost positive electrode (cathode) materials with desirable energy and power capabilities. One approach to boost the energy and power densities of ...

The most commonly used electrode materials in lithium organic batteries (LOBs) are redox-active organic materials, which have the advantages of low cost, environmental safety, and adjustable structures. Although

# Prospects of positive electrode materials for lithium-ion batteries

the use of organic materials as electrodes in LOBs has been reported, these materials have not attained the same recognition as inorganic electrode materials, mainly due ...

In a variety of circumstances closely associated with the energy density of the battery, positive electrode material is known as a crucial one to be tackled. Among all kinds of materials for lithium-ion batteries, nickel-rich layered oxides have the merit of high specific capacity compared to  $\text{LiCoO}_2$ ,  $\text{LiMn}_2\text{O}_4$  and  $\text{LiFePO}_4$ . They have already ...

The soaring demand for smart portable electronics and electric vehicles is propelling the advancements in high-energy-density lithium-ion batteries. Lithium manganese iron phosphate ( $\text{LiMn}_x\text{Fe}_{1-x}\text{PO}_4$ ) has garnered significant attention as a promising positive electrode material for lithium-ion batteries due to its advantages of low cost ...

Recent advancements in cathode materials for high-performance Li-ion batteries: Progress and prospects. Author links open overlay panel Shruti ... lithium ions are released from the anode and move to the cathode. The cathode is the positive electrode of the battery. It is typically made of a material such as lithium cobalt oxide or lithium iron ...

A new perylene-based all-organic redox battery comprising two aromatic conjugated carbonyl electrode materials, the prelithiated tetra-lithium perylene, as negative electrode material and the poly(N-n-hexyl-3,4,9,10-perylene tetracarboxylic)imide (PTCI) as positive electrode material shows promising long-term cycling stability up to 200 cycles.

Polymer electrode materials (PEMs) have become a hot research topic for lithium-ion batteries (LIBs) owing to their high energy density, tunable structure, and flexibility. They are regarded as a category of promising ...

The severe degradation of electrochemical performance for lithium-ion batteries (LIBs) at low temperatures poses a significant challenge to their practical applications. Consequently, extensive efforts have been contributed to explore novel anode materials with high electronic conductivity and rapid  $\text{Li}^+$  diffusion kinetics for achieving favorable low-temperature ...

Lithium-ion batteries (LIBs) are at the forefront of energy storage and highly demanded in consumer electronics due to their high energy density, long battery life, and great flexibility. However, LIBs usually suffer from obvious capacity reduction, security problems, and a sharp decline in cycle life under low temperatures, especially below  $0\text{ }^\circ\text{C}$ , which can be mainly ...

The active constituents of lithium-ion cell are positive and negative electrodes and separator soaked in electrolyte. ... Cui GL, Chen LQ (2017)  $\text{Li}_4\text{Ti}_5\text{O}_{12}$ -based energy conversion and storage systems: status and prospects. Coord Chem Rev 343:139-184. Article CAS ... (2015) Recent achievements on inorganic electrode materials for lithium ...

# Prospects of positive electrode materials for lithium-ion batteries

For the positive electrode materials of water-based zinc ion batteries, existing research mainly focuses on manganese-based oxides, vanadium-based oxides, Prussian blue analogs, metal-organic ...
