

Pulse energy storage compression technology

An X-band switched energy storage (SES) microwave pulse compression system is presented, and its theoretical analysis, numerical simulation, and experimental ...

pulse-compression technology can substantially close the performance gap. Another advantage of TWT systems is that, with lower peak power and with suitable shaping of the transmitter frequency and amplitude within the pulse, ... energy is possible while a pulse is being transmitted. The

switched energy storage (SES) technology and the SLAC. energy double (SLED) technology [13, 14]. e basic. ... [24] The TR method is a passive pulse-compression technology, which is not only ...

Here we give a comprehensive overview on the post-compression technology based on optical Kerr-effect or ionization, with particular emphasis on energy and power scaling.

A pulse-compression-ring circuit for high-efficiency electric propulsion Thomas L. Owensa West Virginia High Technology Consortium Foundation, 1000 Galliher Drive, Fairmont, West Virginia 26554, USA ... resulting in long lifetimes for energy-storage capacitors. System tests were performed using an adjustable inductive load at a voltage level of

RF pulse compression is a mature technology that has been used extensively for large-scale accelerator applications to reconcile the need for short high-peak-power pulses with a cost-efficient ...

of active rf pulse compression have recently received attention, involving switches with optically-varied silicon mirrors [6], ferromagnetic elements [7], PIN diode arrays ... successfully used in rf communication technology, radar applications, etc. Euclid Concepts, LLC recently ... 01 energy storage cavities have lengths of about 2

The interest in using large lasers to achieve a very short and intense pulse for generating fusion plasma has provided a strong impetus to re-examine the possibilities of optical pulse compression at high energy. Pulse compression allows one to generate pulses of...

Pulse energy storage compression technology

Results obtained in several experiments on active rf pulse compression at X band using a magnicon as the high-power rf source are presented. In these experiments, microwave energy ...

Many applications require energy to be delivered on faster timescales. In this case, the circuit may consist of a high-voltage generator and a pulse forming transmission line (PFL) controlled by a closing switch.

Of course, we must also consider that the energy expended for compression is energy withdrawn from the energy chain. Indeed, thinking about a system like the one depicted in Figure 1, hydrogen storage can be justified only by the need to introduce greater flexibility into the energy system, and gaseous storage appears to be the most relevant.

Here, it is concerned chiefly with four physical quantities: the coupling coefficient of the coupling window (0), the energy storage efficiency of the microwave pulse compression system (0...

In the research of the microwave pulse compression, it was found that a new physical model has a high power gain for the rectangular TE1,0,20 resonant mode at 2.920 ...

The MOV pulse-shaping device is attached to a coaxial pulse compression system. The pulse compression system consists of an inductive energy storage section, an exploding wire fuse and an output ...

Thus, microwave pulse compression technology has been investigated widely recently years in theory and experiment in P-band, L-band, S-band, and ... SES (Switched Energy Storage) technology, the output pulse of 1GW/5ns in S-band and 165MW/20ns in X-band have also been successfully generated by scientists in Russia[14-16] and

However, owing to the low-intensity threshold for optical damaging, the use of single-mode optical fibers limits the pulse energy to a few nanojoules. In 1996, a novel technique, based on spectral broadening in a hollow fiber filled with noble gases, extended pulse compression to high-energy pulses (mJ range). This technique presents the ...

This international conference was organized by the sponsoring agencies with the following objectives in mind: to bring together active researchers involved in energy compression, switching, and storage who have a major interest in plasma physics, electron beams, electric and magnetic energy storage systems, and high voltage and high current switches.

The paper presents the results of the experimental research on HPM pulse compression at S band by the method of switched energy storage. The input pulse is of the ...

principle of pulse power compression. (a) The process of low-power energy storage (b) High power output Fig 1.1 shows the simple diagram of pulse power compression. It is the process of charging slowly, and discharging fast.

A pulse duration compression technique that combines stimulated Brillouin scattering (SBS) and stimulated Raman scattering (SRS) was presented in this study, achieving an output pulse duration of 48.3 ps. The feasibility of this approach has been experimentally demonstrated. To be specific, a pulse duration of 7.4 ns is compressed to 48.3 ps with an ...

An X-band switched energy storage (SES) microwave pulse compression system is presented, and its theoretical analysis, numerical simulation, and experimental research are carried out.

Note that the use of a plasma switch as the energy input/ output element makes it possible to change the coupling between the storage resonator and the feed line, and there-fore to optimize the efficiency of energy storage in the compressor. A schematic of the two-channel active pulse compressor is shown in Fig. 1. In this design, the micro-

This patent describes a pulse compression system that compresses electromagnetic energy from a microwave source. It comprises a microwave cavity including a main cavity coupled to the microwave source; and a switch, including means for applying laser energy in the main cavity proximate to an antinode of the single mode.

A high power microwave source based on energy storage switching pulse compression technology can produce a high power microwave pulse with good repeatability and frequency ...

Energy Storage Technology is one of the major components of renewable energy integration and decarbonization of world energy systems. ... [123], the compression/expansion process is relatively slow and takes place throughout all storage containers, resulting in near isothermal behaviour. The pressure of the nitrogen gas fluctuates ...
