With 1,300 GW installed capacity, hydropower is the world's largest source of renewable energy generation, making it critical to pay attention to the operation and maintenance of these facilities. Since 52% of this capacity has been installed before 1990, these assets are particularly now prone to require major rehabilitation.

At Energy Storage Solutions (E22), we have a highly specialized technical team with many years of accumulated experience in the sector, trained to design, implement, commission and provide assistance in the operation and maintenance stage of any of these

Scope: This document provides alternative approaches and practices for design, operation, maintenance, integration, and interoperability, including distributed resources interconnection of stationary or mobile battery energy storage systems (BESS) with the electric power system(s) (EPS)¹ at customer facilities, at electricity distribution facilities, or at bulk ...
