The grid-based sharing energy storage technology, called cloud energy storage (CES) is proposed in, which provides users with energy storage services on-demand, anytime, anywhere. Users could subscribe to the energy storage service from the CES operator to meet their storage needs while saving the cost of investment in storage device [28].

In the "Guidance", for the first time, the establishment of a grid-side independent energy storage power station capacity price mechanism was proposed, and the study and exploration of the cost and benefit of grid alternative energy storage facilities into the recovery of transmission and distribution prices, improved the peak and valley price ...

It means that when the transmission grid price is lower than the price tracking lower limit C_{min} , the energy storage stores power, and when the grid price is higher than the price tracking upper limit C_{max} , the energy storage releases power, or the energy storage is in the floating state. The specific calculation formula of the load tracking ...

The existing peak shaving and demand response mechanism design provides energy storage charging and discharging compensation which can increase energy storage revenue. However, under the existing peak and off-peak price mechanism, independent energy storage charging and discharging for peak shaving is already in place.

This paper proposes a market mechanism for multi-interval electricity markets with generator and storage participants. Drawing ideas from supply function bidding, we introduce a novel bid structure for storage participation that allows storage units to communicate their cost to the market using energy-cycling functions that map prices to cycle depths.

This should also lead to an increasingly locational element in how batteries are dispatched. This will be determined by how the Balancing Mechanism is used to manage transmission constraints. But how do transmission constraints increase Balancing Mechanism dispatch rates, and which locations have the greatest potential revenue upside?
