In the RLC series circuit of Figure 15.4.1, the current amplitude is, from Equation 15.4.7, $[I_0 = dfrac\{V_0\}\{sqrt\{R^2 + (omega L - 1/omega C)^2\}\}$. label{15.15}] If we can vary the frequency of the ac generator while keeping the amplitude of its output voltage constant, then the current changes accordingly.

The bandwidth is the difference between the half power frequencies Bandwidth =B =o2-o1 (1.11) By multiplying Equation (1.9) with Equation (1.10) we can show that o0 is the geometric mean of o1 and o2. o0= oo12 (1.12) As we see from the plot on Figure 2 the bandwidth increases with increasing R. Equivalently the sharpness of the resonance increases with decreasing R.
