Commercial monomers, BMA and St, were distilled in vacuum to remove the aggregation inhibitor. The synthesis of the P(BMA-St) copolymer was conducted in a four neck glass reactor. 1.5 wt.% sodium dodecyl sulfate (SDS, as an emulsifier) solution was prepared with deionized water under N<sub>2</sub> at 60 °C. The mixture of BMA and St (with different mass ratio) was ...

1. Introduction. Development of lithium-ion batteries (LIB) with high energy density can meet the growing needs of portable electronics and electric vehicles [[1], [2], [3], [4]].
