Identifying a Blocking Diode. To check if your solar panel has a blocking diode, look for these signs: Check the terminal box of the solar module. The blocking diode is usually located at the positive end of the series string inside this box. Examine the configuration of the diodes. Blocking diodes are connected in series with the solar panel.

5 pcs 30SQ045 Schottky diodes 30A 45V solar bypass / blocking diodes

For solar panels, we recommend you put one blocking diode on each solar panel, inside an ABS project box. The diode needs to have a voltage and amperage rating above that of the panel. Example: If you have two 175 watt panels each at 42 volts, you will need (two) 8 Amp, 45-volt diodes.  $(175 \text{ watts} / 42 \text{ volts}) = 4.16 \text{ amps.} +$  (plus) side of the ...
