What a solar charge controller does. Think of a solar charge controller as a regulator. It delivers power from the PV array to system loads and the battery bank. When the battery bank is nearly full, the controller will taper off the charging current to maintain the required voltage to fully charge the battery and keep it topped off.

Types of solar charge controllers. There are currently two types of charge controllers commonly used in PV power systems : 1. Pulse Width Modulation (PWM) controller. 2. Maximum Power Point Tracking (MPPT) controller. In this tutorial, I will explain to you about the PWM Solar Charge Controller. Specification. 1 arge ...

For the majority of solar shoppers, there's no need to worry about charge controllers. Rooftop or ground-mount solar installations with a battery backup are almost always linked to the electric grid, and in the case that your battery is completely charged, your excess solar energy will automatically reroute there.. If you're interested in installing ...
