3. classification of solar collectors 1 - Flat-plate collectors - The absorbing surface is approximately as large as the overall collector area that intercepts the sun rays . 2 - Concentrating collectors - Large areas of mirrors or lenses focus the sun light onto a smaller absorber . cross section of typical liquid flat plate collector concentrating solar collector

However, flat-plate collectors have some limitations when compared with other types of solar energy collectors such as evacuated-tube collectors or concentrating solar power systems (CSP). For instance, they're less efficient at capturing sunlight than other types due to their design which limits how much light can be captured from different angles throughout the day.
