If you want to carefully analyze the behavior of a circuit that includes a solar (aka photovoltaic, or PV) cell, you need to use an "equivalent circuit"--i.e., you need to replace the cell with a group of basic components that can produce similar electrical behavior. This is the equivalent circuit for a solar cell:

Construction of Circuit. There are five stages of this Circuit: PV Solar panel; Battery Charger ; Switching Pulse Oscillator; Switching Device; Step Up transformer; Solar Panel. This PV Solar Inverter Circuit uses a 12-volt/20-watt solar panel to obtain input bias. When exposed to the open Sun, the solar panel produces a peak output of 12 ...
