A sun tracking system is a mechanism that orients solar panels towards the sun to maximize energy absorption throughout the day. As the sun moves across the sky, the tracker adjusts the position of the solar panel to keep it aligned with the sun's rays.

The sun is currently in an extremely active phase of its 11-year solar cycle, and is amid a peak period known as solar maximum in which solar flares and explosive coronal mass ejections can be ...

Solar trackers are devices that direct solar panels or modules toward the sun. And in order to maximize the energy capture, these devices have to change their ...

In order to maximize the power from the solar panel, the panel should face the sun all time. In this project, we will make a sun tracking system which will help the solar panels to generate maximum power. In some of our previous articles, we have built simple system to track power generated from solar panel and other solar energy related ...
