What Happens if You Connect Solar Panels Directly to a Battery? When sunlight hits the cells on a solar panel, it produces a chemical reaction and generates direct current (DC). The solar panel transmits this current into the battery. The current is used to charge the battery and can also be used to run appliances and other devices. If the solar panel is directly connected to ...

Don't connect a solar panel directly to a battery. Doing so can damage the battery. Instead, connect both battery and solar panel to a solar charge controller. It's recommended you fuse your system. Safety best practices, y'all! Place one fuse between the positive battery terminal and the charge controller. Place another between the positive solar ...

Whether you connect solar panels in series or in parallel, the total power output (in Watts) is the sum of the power generated by each solar panel. The difference between these two types of configurations is the total ...

Maximum Solar Power Input of 390W (12V) 780w (24V) (I have the mppt connected to a 138a 12v battery)  
Alistair replied to Shelby: All looks good mate! - your MPPT can handle up to 46V input and if you have your solar blankets in parallel (both positives together, both negatives together) then your maximum voltage will be about half that (23.15V).

Parallel Connection of Solar Panels and Batteries with Automatic UPS System - 12V Installation. 12V is the most common solar panel wiring connection with batteries. Generally, to achieve the 12VDC to 120/230VAC system, both PV panels and batteries are connected in parallel.

Concerning your solar panels, they hook to your SCC (Solar Charge Controller). From your SCC it is wired to charge your batteries and should also be fused or have a breaker. ...
