

Solar cuttings of mint

However, sometimes the stems of mint cuttings can turn black, which can be alarming for gardeners. There are a few reasons why this may happen, including disease, pests, or stress. However, black stems on mint cuttings can also be caused by environmental factors such as too much sun or water. If you are concerned about your ...

While sowing mint seeds isn't hard, it's a much slower process than using mint cuttings (unless you sing to your mint seeds every night!) You should see a mint seedling pop through the soil in 1 to 2 weeks. As soon as your seed starts to sprout out of the soil, start adding a healthy dose of sunlight.

The best time to plant mint cuttings is the last days of spring and early days of summer. The mint plant is in full growth and yet to blossom during this period. Keep the cuttings away from sunlight. The mint plant performs best in humid conditions. Mint plants will perform well in moist, light soil. Ordinarily, the mint plants are found along ...
