The retail price of electricity to industrial customers is generally close to the wholesale price of electricity. In 2022, the U.S. annual average retail price of electricity was about 12.49¢ per kilowatthour (kWh).¹ The annual average retail electricity prices by major types of utility customers in 2022 were: Residential 15.12¢ per kWh

Solar system sizes are usually described in kilowatts (kW, where 1kW = 1,000 watts). If you plan on purchasing your solar panel system (either with cash or a solar loan), you'll want to know how much a system will cost per watt.. A solar system's \$/W cost is unimportant if you plan to go solar under a solar leasing or power purchase agreement (PPA) program.

Schlaich [4] and Bernardes et al. [36] evaluated the cost of components in SCPP system with different size parameters, forecasted the levelized electricity price (LEC) of SCPP, and explored the LEC sensitivity to some important economic parameters. However, they didn't take the effect of carbon credit into consideration.
