Energy Storage: When your solar panels generate more electricity than your home needs, the excess energy is directed to the solar battery, charging it for later use. Discharge: When your solar panels aren't generating power (e.g., at night), the solar battery discharges the stored energy to power your home.

This makes energy storage increasingly important, as renewable energy cannot provide steady and interrupted flows of electricity - the sun does not always shine, and the wind does not always blow. As a ...
