In the case of an 18V solar panel and a 12V battery, the 18V panel provides enough voltage to push current into the 12V battery, thereby charging it. However, there's a catch. If the voltage is too high and isn't properly regulated, it can overcharge the battery, potentially leading to damage or even reducing the battery's lifespan.

100 Watt 12-18v solar panel: The panel arrived quickly, but there was an obvious penetration to the packaging. Upon opening the package, I discovered a pretty significant dent in the aluminum panel. No cracks in the glass or cells, but I was concerned. I needed this panel for the weekend.

I would always choose the higher voltage panel (all other things being equal). I am running 250w panels (30.3v / 8.37a) in series sets of three to bump the voltage up to ~92-100vdc and then combining three sets (parallel) into a combiner box.
