A solar cell is an electronic device which directly converts sunlight into electricity. Light shining on the solar cell produces both a current and a voltage to generate electric power.

Yes, there are rules and regulations that you must comply with for solar generation. If you connect your solar panels to the grid to sell back power, you must comply with Part 6 of the Electricity Industry Participation Code 2010. This includes adhering to standards for the power inverter and rules around connecting to the distribution network.

Wind power was once again the most important source of electricity in 2023, contributing 139.8 terawatt hours (TWh) or 32% to public net electricity generation. This was 14.1% higher than the previous year's production. The share of onshore wind power rose to 115.3 TWh (2022: 99 TWh), while offshore production fell slightly to 23.5 TW (2022: 24.75 TWh).
