What is a gel battery? A gel battery is a lead-acid electric storage battery that: o is sealed using special pressure valves and should never be opened. o is completely maintenance-free.* o uses thixotropic gelled electrolyte. o uses a recombination reaction to prevent the escape of hydrogen and oxygen gases normally lost in a flooded

battery pack is then assembled by connecting modules together, again either in series or parallel. o Battery Classifications - Not all batteries are created equal, even batteries of the same chemistry. The main trade-off in battery development is between power and energy: batteries can be either high-power or high-energy, but not both.

Can be cheaper than gel batteries; Can be recharged easily, up to five times faster in some cases; Perform well in temperatures below 32 degrees; Gel Batteries; Lower power capacity; Have a longer lifespan than AGM batteries; Does well in warmer temperatures, doesn't perform well in below freezing temperatures; So if you're living in a warm ...
