And because there can be hours and even days with no wind, for example, some energy storage devices must be able to store a large amount of electricity for a long time. A promising technology for performing that task is the flow battery, an electrochemical device that can store hundreds of megawatt-hours of energy -- enough to keep thousands ...

Power-to-gas (PTG) technology converts surplus or intermittent energy into hydrogen, typically through water electrolysis. An advantage of PTG over traditional electrical energy storage technologies such as batteries, is that the converted excess energy does not necessarily have to be put back into the grid, but can also be transitioned to other higher value ...
