Capacitors sound like a common problem. What I'm not sure is which replacement capacitor is best. Here's photos of this fan's capacitor and wiring in its control box. Using a digital multimeter to test capacitance between the red wire and the gray wire across from it on the capacitor, I got a reading of 0.430uF.

The color bands on a capacitor are read from left to right, with the capacitor's leads pointing downwards. The first two (or sometimes three) bands represent the capacitor's value. Each color corresponds to a digit from 0 to 9. For instance, red represents "2", and orange represents "3".
