If your composite roof is older than 15 years or starting to show major signs of wear, solar installers will likely recommend re-shingling before installing solar panels. Even so, composite shingles are often considered the best material on which to install solar panels.

The angle of your roof is also called the pitch. Pitch affects the power solar panels produce because it changes their orientation to the sun. Optimal solar energy production occurs when sunlight hits solar panels at a right angle. If the sun is directly overhead, optimal production will occur with a solar panel that is horizontal.

Installing solar panel systems on a flat roof is not too different from a sloped roof. In fact, it could be a safer job to do since you are not moving around on a sloped surface. However, it still involves a series of steps you want to follow carefully to ensure a smooth process.
