Connect the positive (+) and negative (-) leads of the solar panels to the corresponding input terminals on the MPPT charge controller. Double-check the polarity to avoid any reverse ...

These will be labeled as "PV Array", "Solar Panels", or "Panel". Again, pay close attention to the indicated polarities. Step 10: Connecting the PV Array Wires. Once more, match the polarity. The positive wire goes to the positive solar panel terminal, and the negative wire connects to the negative terminal.

Distance between solar panels. The choice of wire gauge is influenced by the spacing between solar panels. Thicker wires are needed to transmit signals over greater distances without experiencing voltage drops, which is necessary for system safety and reliability. Say you"re putting solar panels on your roof, and they"re 3 feet wide each.
