The tested tram consists of two carriages, one of them equipped with batteries. According to him, before the test, his party had applied for a permit from PT Kereta Api Indonesia (KAI) to use the railroad crossing. The tram uses battery power as the only source of energy to power its air conditioner, compressor and lighting. (LK/AR)

The third use of the Rifton TRAM is for gait training. The TRAM can support the user in a standing position. A variety of accessories can be added to the TRAM to provide more support as needed to help the user take steps. The lifting column of the TRAM can be raised to decrease the body weight percentage the user has to support while walking.

The auxiliary services are a list of auxiliary equipment such as lighting, fans, steering, air-conditioner, compressor, et al. ... "12Trips==1") or when the battery SOC is lower to 15% after a round trip (state: "OneTrip==1"), the tram will stop charging the battery with FC at a constant charge rate 2C until the battery SOC is recovered ...

The trial involves installing battery packs on an existing Hitachi-built Sirio tram, which covered a section of the line under battery power. The innovation allows power to be returned to the batteries when the train brakes, ...
