order to provide galvanic isolation between the UPS input and output. This is false. The reason internal transformers were used in early UPS systems is because they were inherently required due to the power inverter technology used in the UPS design. The first UPS products were developed over 40 years ago and used a ground-referenced battery ...

****Isolation****: Transformers provide electrical isolation between the grid and the BESS, which can be critical for safety and for mitigating issues like ground loops or electrical faults. 3. ****Phase Conversion****: Some transformers can convert between different phase systems (e.g., from three-phase to single-phase or vice versa), allowing for ...
