Battery backup devices have varying degrees of backup ability. To determine how powerful a UPS you need, first, use the OuterVision Power Supply Calculator to calculate your computer's wattage requirements. Take this number and add it to the wattage requirements for other devices you'll plug into the battery backup.

**Rectifier:** Stores line power in the battery after converting the AC power into DC power. Power disruptions only affect the battery charging process because the battery is being charged by the rectifier. **Battery:** Stores the power for use when the power source is interrupted, and determines the length of time the UPS will support your equipment.

**Standby UPS (Offline UPS):** Ideal for protecting personal computers and small electronics, this type switches to battery power only when the main power source fails. **Line-Interactive UPS:** Commonly used for servers and network equipment, this UPS system includes an automatic voltage regulator (AVR) to correct minor fluctuations ...
