Photovoltaic cells convert sunlight into electricity. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy that ...

Solar panels on a rooftop in New York City Community solar farm in the town of Wheatland, Wisconsin [1]. Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2023, utility-scale solar power generated 164.5 terawatt-hours (TWh), or 3.9% of electricity in the United States.

A report that examines the current and future forms of solar technologies for electricity generation, without making forecasts or policy recommendations. It focuses on grid-connected solar-powered generators in the
