His company is working to create ones that are between 2 and 20 microns thick. (Typical lithium-ion batteries have lithium in the cathode, not the anode.) The process of making the lithium metal ...

Like more creative descriptions, technical descriptions sometimes draw on the "five senses" and metaphorical comparisons (analogies) to allow the reader to fully conceptualize what is being described. More often, however, they rely on ...

In the social sciences and related fields, a thick description is a description of human social action that describes not just physical behaviors, but their context as interpreted by the actors as well, so that it can be better understood by an outsider. A thick description typically adds a record of subjective explanations and meanings provided by the people engaged in the ...

To achieve a high energy density for Li-ion batteries (LIBs) in a limited space, thick electrodes play an important role by minimizing passive component at the unit cell level and allowing higher active material loading ...

Testing conducted by Apple in August 2022 using preproduction Apple Watch Ultra (GPS + Cellular) paired with an iPhone; all devices tested with prerelease software. Battery life varies by use, configuration, cellular network, signal strength, and many other factors; actual results will vary. Ultra Wideband availability varies by region.

comprising a battery. The technical definition of a battery and cell, as indicated in the UN Manual of Tests and Criteria, is as follows: Battery means two or more cells or batteries which are electrically connected together and fitted with devices necessary for use, for example, case, terminals, marking and protective devices. Units

I've always understood "thick description" as qualitative findings (i.e., results) that have substantiated details about participants and their contexts, circumstances, cultures, etc., allowing us as readers to walk with them in their ...

Another technical name for this battery is 5004LC. Applications. Coin cells like CR3032 are long-lasting, small in size, and offer reliable power. They are thus capable of delivering several working hours. Therefore they are highly used on wristwatch calculators, toys, and medical devices like compact thermometers. Conclusion. Batteries are available in ...

The term "battery" generally means "a row of..." as in a battery of guns or battery hens. A battery is a row of cells. The typical automotive battery of 12 volts is made from six cells of nominally 2 volts each. Electrodes. Electrodes, also known as "plates", are the current collectors of the battery. The negative plate collects the electrons ...

Apple Watch All-Day Battery Life testing was conducted by Apple in August 2020 using preproduction Apple Watch SE (GPS) and Apple Watch SE (GPS + Cellular), each paired with an iPhone; all devices were tested with prerelease software. Battery life varies by use, cellular coverage, configuration, and many other factors; actual results will vary.

Thick descriptions take into account the directly unobservable contextual understandings that make an action or social event meaningful. Developed by anthropologist Clifford Geertz in the early 1970s to describe his own approach to ethnographic research, thick description has since been adopted by qualitative researchers across various disciplines. The ...

Thick description, which focuses solely on qualitative research, focuses on interpreting observations to provide meaning from the cultural and social interactions. So beyond observation, one has to describe, interpret, and analyze the situation in question. Characteristics of Thick Description .
