You can determine when a battery is getting sick, so to speak, and replace it before it infects all the other batteries in the string. Such a system could be integrated with a data center infrastructure management (DCIM) tool ...

Without net metering, any excess electricity your solar panels produce would simply go to waste because there would be no way to store it. With net metering, this power is sent back to the grid where it can be used elsewhere. This makes the entire power system more efficient because less power is wasted. Lower Energy Costs in Peak Times
