When Gaston Planté invented the lead-acid battery more than 160 years ago, he could not have foreseen it spurring a multibillion-dollar industry. Despite an apparently low energy density--30 to 40% of the theoretical limit versus 90% for lithium-ion batteries (LIBs)--lead-acid batteries are made from abundant low-cost materials and nonflammable ...

Flooded lead acid batteries, on the other hand, will freeze in the cold. The battery plates can crack, and the cases can expand and leak. In extreme heat, the flooded lead acid battery will evaporate more electrolyte, risking the battery plates to atmospheric exposure (the lead plates need to stay submerged). 9. Sensitivity To Overcharging . Flooded lead acid batteries are ...
